Date: June 26, 2008

**Subject: Alden Enterprises and Toma Enterprises hired to facilitate and thereafter acquire project funding for the company's **biowastes-to-renewable energy, biofuels, organic foods, and water independence** technology.**

**WaterSmart Environmental, Inc.** announces the hiring of Alden Enterprises and Toma Enterprises to facilitate and thereafter acquire project funding for the company's **biowastes-to-renewable energy, biofuels, organic foods, and water independence** technology.

The **Biowastes-To-Renewable Energy** agricultural activities consist mostly of tilapia fish production and associated processing plus the production of beef, cotton, eggs, fruits, milk, nut, rice, sugarcane, vegetables, and wheat. Additional agricultural activity includes the farming of Spirulina microalgae that will be used as a whole food product for tilapia fish feed. Excess Spirulina will be converted into biodiesel and compressed natural gas (CNG) biofuels. These several agricultural activities share their routine annual profits 50:50 with the communities they serve. The manufacturing activities include the construction of self-biofueled trains, self-biofueled ships, and renewable energy tidal generators. The manufactured products will mostly be exported to worldwide markets to enable repayment of project financing.

WaterSmart Environmental is marketing its Kyoto Protocol compliant wastes-to-energy technology on an economic development platform to concentrated animal feeding operators and to municipalities. Animal farmers benefit by purchasing biodiesel, electricity, and natural gas (methane) at a 20% discount from retail. Municipalities also benefit by making biodiesel, electricity, natural gas, and potable water available to its citizens and businesses at a 20% discount from existing prices. The technology is marketed on a build-own-operate basis thereby eliminating the necessity for local sales and property tax increases since project financing is entirely secured from the financial marketplace.

Municipalities that embrace the waste-to-energy technology automatically become zero waste-to-landfill communities. The waste-to-renewable energy technology has been slowly developed over the last 10 years. It is just now being introduced to the international marketplace. The technology has the clear potential for making every single city throughout the world energy and fuels independent while reducing oil and natural gas imports. The technology will also permit every single city throughout the world to improve water and wastewater treatment infrastructure while creating jobs and investment opportunities. The waste-to-energy technology can also be applied to Sugar Cane Mills as well as Pulp & Paper Mills with equal success. Both types of mills become energy, food, fuels, and water independent while significantly increasing profits from routine operations. In the case of Sugar Cane Mills temporary and seasonal jobs turn into full time better paying jobs. **Widespread use of the technology carries with it the potential for contributing substantially to the reversing of global warming.**

***WaterSmart Environmental, Inc.*** is a provider of waste-to-energy, food independence, water independence, and energy independence technologies and a manufacturer of highly engineered water purification components and systems. The company designs and builds a wide variety of water treatment equipment including packaged water and wastewater treatment plants, UltraPac™ aerobic package plants, OAT™ Process anaerobic digesters with associated energy production, aerators, filters, Pur-iSep™ and SmartWater™ oil/water and solids/liquids separators, RainDrain™ perimeter trench sand filters for stormwater runoff, dissolved air flotation separators, air strippers, complete skid assembled aqueous waste treatment plants, FilterFresh™ skid mounted potable water production plants, skid mounted wastewater treatment systems for laundromats, commercial laundries, and car/truck wash facilities with water reclamation and reuse, softeners, demineralizers, activated carbon treatment equipment, and water purifiers for domestic and international markets.

To Whom It May Concern:

The firms of Alden Enterprises and Toma Enterprises have been hired to facilitate and thereafter acquire project funding for the company's **BioWastes-To-Renewable Energy, Biofuels, Organic Foods, and Water Independence** technologies.

Alden Enterprises is owned and operated by Gwen Alden. Toma Enterprises is owned and operated by Vince Toma.

Any questions regarding these appointments may be directed to C. G. (Chuck) Steiner, President and CEO of **WaterSmart Environmental, Inc.** With Warm Regards I am

Very truly yours,

**WaterSmart Environmental, Inc.**
