Subject: Jeruz Energy, Inc. Terminated As Project Developer

WaterSmart Environmental, Inc. announces the termination of **Jeruz Energy, Inc.** as its sole and exclusive partner to develop WaterSmart's wastes-to-renewable energy technologies throughout Asia, Europe, and North America. WaterSmart Environmental is a manufacturer of water and wastewater treatment equipment and a provider of waste-to-renewable energy technologies.

Jeruz Energy, Inc. is a Florida Corporation with offices in California and India. Its primary mission is to make a difference in the world with clean energy, clean water, and clean air. The current focus of **Jeruz Energy, Inc.** is to meet the challenge of energy and clean environment demand in India. The company has already formed a team of experts in wastes-to-energy technologies to meet these challenges.

Jay Pavasia with Chuck Steiner

The termination of **Jeruz Energy, Inc.** occurred as a result of its refusal to pay for technical services rendered in connection with the development of the **Jeruz Energy, Inc.** Website and the associated transfer of substantial intellectual property and waste-to-energy technology information. Projects that were in the initial stages of development by **Jeruz Energy, Inc.** will be paused until a replacement project developer is found.

WaterSmart Environmental is marketing its Kyoto Protocol compliant wastes-to-energy technology on an economic development platform to concentrated animal feeding operators and to municipalities. Animal farmers benefit by purchasing biodiesel, electricity, and natural gas (methane) at a 20% discount from retail. Municipalities also benefit by making biodiesel, electricity, natural gas, and potable water available to its citizens and businesses at a 20% discount from existing prices. The technology is marketed on a build-own-operate basis thereby eliminating the necessity for local sales and property tax increases since project financing is entirely secured from the financial marketplace. Municipalities that embrace the waste-to-energy technology automatically become zero waste-to-landfill communities. The waste-to-renewable energy technology has been slowly developed over the last 10 years. It is just now being introduced to the international marketplace. The technology has the clear potential for making every single city throughout the world energy and fuels independent while reducing oil and natural

gas imports. The technology will also permit every single city throughout the world to improve water and wastewater treatment infrastructure while creating jobs and investment opportunities. The waste-to-energy technology can also be applied to Sugar Cane Mills as well as Pulp & Paper Mills with equal success. Both types of mills become energy, food, fuels, and water independent while significantly increasing profits from routine operations. In the case of Sugar Cane Mills temporary and seasonal jobs turn into full time better paying jobs.

WaterSmart Environmental, Inc. is a provider of waste-to-energy, food independence, water independence, and energy independence technologies and a manufacturer of highly engineered water purification components and systems. The company designs and builds a wide variety of water treatment equipment including packaged water and wastewater treatment plants, UltraPac™ aerobic package plants, OAT™ Process anaerobic digesters with associated energy production, aerators, filters, Pur-iSep™ and SmartWater™ oil/water and solids/liquids separators, RainDrain™ perimeter trench sand filters for stormwater runoff, dissolved air flotation separators, air strippers, complete skid assembled aqueous waste treatment plants, FilterFresh™ skid mounted potable water production plants, skid mounted wastewater treatment systems for laundromats, commercial laundries, and car/truck wash facilities with water reclamation and reuse, softeners, demineralizers, activated carbon treatment equipment, and water purifiers for domestic and international markets.
